

## FOOD PROCESSING MACHINES MANUFACTURER

# SCREW CONVEYORS

Conveyor made in the channel shape (type Y O;U;Ω ) and working band inside (band: full, shifting-mixing etc.). Unit is made to work in the vertical, leaning, horizontal position. Application in passing the fresh or frozen fruits and vegetables. In special applications: screw with heating in thermal break, dozing screw in the weighing roll machine, inside bands in mixing drums, drum washers etc.

# CONVEYORS-REDLERS

Units used to pass products in closed, dense channel between carrying belt stills. There are shafts along the channel to doze product in defined places. Transported product is not falling out of the unit. We can also install nozzle system to clean the unit.

**SIDE REDLER** – belt with side stills in the straight channel (horizontally or slantwise) which makes possible to return product which did not pour out. Unit easy to maintain cleanliness. Possibility of applying tight hermetic covers.

**HORIZONTAL REDLER** – gathering stills between chains in slides lets the channel to be on different angles. There is possibility of pouring out the product directly from the refrigeration tunnels in any place and doze product in other places (placed on the same level or on different deck) on sorting transporters group.
